

## DNA Timeline: Posters

“DNA Timeline: DNA Science from Mendel to Today.” 2016. Accessed February 8.  
<http://www.dnai.org/timeline/>.

The DNA timeline goes through many of the major discoveries that have driven our understanding of genetics since Mendel. Pick two scientists and create a PowerPoint slide poster (to be printed out on regular printer sized paper) that covers the following:

1. Who they are (pics are helpful) and when they lived
2. Background about the person: hometown/state, schooling, other interests, etc.
3. Discovery: what did they discover? How did they do it?
4. Importance: How has their discovery influenced the field?

The year of their discovery should be prominent. Be sure to include works cited entries at the bottom of the slide and cite in text as necessary.

We'll be hanging our timeline in the DNA hallway!
