This Summarize, Review, and Practice is brought to you for free and open access by the Bioinformatics at DigitalCommons@IMSA. It has been accepted for inclusion in Introduction to NCBI by an authorized administrator of DigitalCommons@IMSA. For more information, please contact pgarrett@imsa.edu, jean@imsa.edu.

Obtaining Genomic Sequence Practice

1. Select a gene that you wish to investigate
2. Take a screenshot of the Genomic Context for your gene in the record and paste below.
3. Following the directions in the video, access the GenBank sequence for your gene, +/- 100 bp up and downstream. Make note of what the region was before and after you changed it to the appropriate region.
4. Download the FASTA format version of your sequence and save.
5. Go back to your original record and view the "Gene Table" format.
6. Take a screen shot of your gene table and paste it here.
