## Readings on Current Biology: Guiding Questions

*Type your answers into the word document below.*

- **This reading really only skims the surface of a vast, detailed, and complex topic. What are some specific key points that you took away from the reading? List and explain at least 5 or 6.**
- **Come up with a list of questions under each of your key points that you would ask to learn more.** For example, if you're reading about how genetic modifications change DNA sequence, you might list things like 'what does the genetic material look like? How is genetic material used?'
- **The topic you read about has implications for both the field of biology and for society as a whole. Explain the social relevance of the topics addressed in your reading.**
