

GROCERY SALES DURING COVID-19

Madhav Parthasarathy

PURPOSE

During these trying times, the novel virus has taken its toll on the economy. As a result, there must be a method to prevent any further loss in revenue for grocers especially.

METHOD

I started this project off, by researching the topic and its previous applications. As the virus is quite new, I was made to improvise a solution using machine learning.

USING MACHINE LEARNING

After finding a certain amount of data, I was able to utilize machine learning in order to predict the sales through certain periods of time.

CONCLUSION

Due to Covid-19, there had been an extreme disparity in the sales of grocery stores, and being able to predict these sales, will help prevent any further trouble.
