WESOLV: MBA JOB ANALYSIS

Xioafan Li

COMPANY BACKGROUND

What is WeSolv?

WeSolv is a startup that focuses on bringing the most qualified candidates to prospective hiring companies by designing and utilizing case challenges to accurately assess the candidates' skill sets. Their new approach to hiring MBA candidates disrupts the hiring process for companies who want the students who best fit their job offerings.

PROJECT DESCRIPTION

Three Step Process

The business project was broken up into three steps. There was first the preparation stage to go over all the company's previous materials, research on various topics on the MBA job market, and finally a deliverable communicated as a spreadsheet model of MBA jobs by skills.

RESULTS

Research & Spreadsheet

Information was collected onto a document about the industries, functions, and skills most common for MBAs, the companies that hire the most MBAs, important MBA skills, and specific MBA jobs. A spreadsheet was also made from a variety of job listings of skills needed in MBA jobs from the companies that hire the most MBAs.

REFLECTION

Skills Gained

I learned to complete tasks and conduct research efficiently, and how to manage my time correctly in order to maximize results. In addition, I learned how to work in an office environment, where I was able to work independently on a project that gave direct benefit to my company.
